

ChemWatcher integrated chemical management system

Transform isolated chemical data from multiple sources into critical information

Applications

- Monitor performance remotely and in real time
- Optimize chemical usage and spend
- Automate inventory management
- Eliminate reporting time

Features

- Cloud-based system accessible from anywhere
- Customizable dashboards based on evergreen data
- Integrated customer or third-party data
- Automated or mobile data entry
- Configurable e-mail alerts
- 100% auditable data platform

ChemWatcher* integrated chemical management system enables active management of all production-chemical-related field activities. Data ingestion from multiple sources and formats enables contextual analysis, augmenting the monitoring of operational status in near-real-time. The ChemWatcher system provides critical information related to the health of your production operations. Through interactive and customizable visualizations of system data, ChemWatcher system provides full visibility into the performance of your chemical treatment program. Given the new normal in our industry today, remote monitoring is more important than ever. Real-time data acquisition capabilities ensure that data-driven insights, rapid anomaly detection, and proactive management of your assets are at your fingertips, regardless of where you are physically located.
